Peking's Hall of People with new door controller from Germany

Doors from EFAFLEX work spectacularly for their Chinese sales and service partner DOUBLE STAR: the underground garage of the Great Hall of the People in Peking is now secured with an EFA-SST®-L Premium door. The highest security levels are needed here, where the armoured limousines of Chinese statesmen and state guests drive through. These demands are now fulfilled by a high-speed door made in Germany.

The Great Hall of People is considered one of the most symbolic and monumental structures in Peking, the neo-classic structure was built in just ten months back in 1958 and is located on the west side of the famous Tiananmen Square. The building is used by the Chinese government as a reception for state guests and as a venue for national celebrations.

All the more important that all the entrances to the building can be completely secured. This is an opportunity that the Chinese sales partner of EFAFLEX used to fit an EFA-SST®-L Premium door on the entrance to the south-west underground garage in October 2013. The rapid opening and closing speeds of this door make it possible to keep the entrance to the underground garage open for minimal periods of time, ensuring unauthorised people cannot gain access to the building.

This has provided DOUBLE STAR with a real coup in terms of references in China. Being the supplier to such an important state building brings the highest recognition in the country for EFAFLEX and, especially for Mr. Wang Zhongming, the owner of the Chinese sales and service partner who specialise in parking systems.

The Great Hall of People in Peking has been depicted on bank notes since the third Chinese currency series. In the current fifth series, it appears in red on the highest denomination note, the 100 yuan note. Perhaps the EFA-SST®-L Premium might even make it onto a Chinese note in the future, who knows?
